# Positionen

This document defines a object position messages overview for MobileWeb mobile portal.

## Vehicle/Object selection

If you want to show position messages to a vehicle/object, you have to select it via the combobox at the top.

For better usage you can filter the selectable objects by using the integrated input text field for searching.

## Options menu

Extra position list options are located at the button with the ⚙ gear symbol right of the object selection combobox. If you press it a submenu is shown with the following elements

| | | |
|---|---|---|
| ↻ | Refresh | Here you can refresh/reload the view of current loaded position list page. |
| | On time positioning | Sends a single request for get the current vehicle/object position |
| | Filter by… | Opens the dialog for activate/deactivate Filters. |

## Position list

The position list gives you informations about the position messages of currently selected vehicle/object.

## Basic informations

Each position record contains the following informations about a location message of selected vehicle/object:

- Date and time of position message.
- A symbol, associated with the message reason.
- The reason of the position message.
- A address text of the position message.
- The ground speed if defined.

## Conditional Informations

On ignition messages (ignition on/off) the following informations will be shown, if available:

- The driver name
- The mileage
- Fuel informations (only on ignition off)

## Extended Informations

Each position message can contain some extra informations, not visible at default. You can show it by touching/clicking the single position message. If allready visible it will be hidden on touch/click.

extended informations are:

- Telemetry messages
- Operation hour counters
- Box Accu capacity

if availible.

## Actions of a position message

Each position message can have 0-n associated actions. THese are located below the extended Information and are only visible if the extended Informations are shown.

The following actions are availible:

| | | |
|---|---|---|
| ✛ | show on map | Shows the current position at detail map. Is availible in must cases, but if GPS signal is lost its invisible. |
| 💧 | edit Tankage | Edit, create or delete tankage informations. Its only visible on messages of type "ignition off". |

# Page navigation

The position list is shown paginated. Currently a fix amount of 8 messages is show on each page.

You can navigate with the navigation bar at the bottom of the page. It allows you:

- Browse forward and backward with single steps, by using the buttons with a single arrow.
- Browse forward and backward by moving the view area to next avialable page range, by buttons with double arrow symbol.
- Direct selection of a page by selecting from current shown view area numbers. (3 elements)
