

# file\_storage/modify\_file.php

Allows editing the meta information of a single file from file storage.

## Description

GET

`/file_storage/modify_file.php?company=RTI_COMPANYKEY&import=IMPORTKEY&file=UUID&action=action`

## Parameters

| Parameter | Description            | Type   | Note                                                                                                                                                                                                                                                                                                                                     | Mandatory |
|-----------|------------------------|--------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| company   | RTI company key        | string |                                                                                                                                                                                                                                                                                                                                          | yes       |
| import    | RTI import key         | string |                                                                                                                                                                                                                                                                                                                                          | yes       |
| file      | UUID of requested file | string | You can receive this value via file_storage/get_overview.php or a sreturn value from file_storage/upload_file.php, if the file was directly uploaded via RTI.                                                                                                                                                                            | yes       |
| action    | action type            | string | possible values: <ul style="list-style-type: none"><li>BIN: move file to bin</li><li>DELETE: delete file permanently (attention: This removes the file permanently so it can not be restored!)</li><li>RESTORE: restore a file from bin</li><li>RENAME: change shown name of file</li><li>MOVE: move file to another directory</li></ul> | yes       |
| name      | new name of file       | string | only relevant if action "RENAME"                                                                                                                                                                                                                                                                                                         | (yes)     |
| path      | new path of file       | string | only relevant if action "MOVE"<br><br>Format: folder/subfolder/.../target folder (separated by /)<br><br>Root does not have to be specified. To move the file to root directory, just leave the param empty.<br><br>Paths are case insensitive.                                                                                          | (no)      |

## Return

On success you will receive "OK". On missing parameters or errors you will receive "**ERROR:description**".

## Example calls

### set a new name

```
https://map.yellowfox.de/rti/file_storage/modify_file.php?
company=COMPANY_RTIKEY&import=IMPORT_RTIKEY&file=UUID&action=RENAME&name=neuer name
```

### move file

```
https://map.yellowfox.de/rti/file_storage/modify_file.php?
company=COMPANY_RTIKEY&import=IMPORT_RTIKEY&file=UUID&action=MOVE&path=Bilder/Fotos
```
