

# Analoge Messwerte

The basis of the analog inputs reports are the analog values of the detection device.

## Index

## Report content

Based on these analog values (eg temperatures), the measured values can be evaluated graphically and in tabular form in this report for each day. Here, there are 3 basic types of representation:

- a diagram showing the individual analog values of the day with defined threshold lines
- a tabular summary that summarize the average, the maximum and minimum analog values for each hour in a several row
- a detailed table, which list all single analog values of the report period

From the HTML output you can use the "Change" button in the upper right position to change the telemetry input, report type and output format.

## Requirements

- supported hardware
- active analog inputs

## Output formats

this report support the following output formats:

- HTML
- PDF
- Excel
- CSV
