Fahrzeuge verbinden

In this module you're able to connect tablets and/or drivers with objects.

Requirements

Generally

Only administrators are allowed to connect or disconnect.

Displays

YellowTracker 200 or 500 and Tablets.

Drivers

YellowTracker 200 or 500 with firmware 1.12.280 or higher.

Functions

connect displays

If a solo tablet is connected with a object, it's no more visible in the portal. It's a unit with object. You now have to send messages or orders for example to the object itself.

connect drivers

Once a driver has been connected to a vehicle that is displayed for the duration of the connection as a registered driver key. A manual authentication on the vehicle is then no longer possible.
