Functionality

The basis of the report are the speed of an detection device at each submitted position. Based on this values, this report evaluate the driven speed and overspeed messages. The HTML and PDF output display the velocity graphically in diagrams. It display a daily summary as a graph for each day that provides an overview. Including a separate chart for each hour in which position reports exist. The individual measurement points are shown in the diagrams by blue dots on the line speed.

When position reports are available with speeding, they are listed for each day in a separate table below the graphs. Additionally display this report a table which contain all overspeedmessages with their position and timepoint.

From the HTML output you can use the "Change" button in the upper right position to change the telemetry input, report type and output format.

Output

this report support the following output formats:

- HTML
- PDF
- Excel
- CSV
- Google Earth
