Prerequisites

The Assistant is available once you booked certain options. Please contact your sales team for more information.

Functionality

The search assistant restricts your view on the amount of data by applying restrictions/conditions to your view. Therefore you will be guided by 7 steps. You may jump directly to a certain step by using the option in the Quickbar, or just navigate from step to step by the available buttons.

Step 1: Select Vehicles

You may choose between *all vehicles* or different Vehicle groups or vehicles, even combinations. Just tick the box in front of a vehicle or group, and click *next*.

Step 2: Select time period

You can select the time range to search for messages, by using the fields *date (from-to)* and *time*. There is a calendar available as well. Just press *next* to get to the next step.

Step 3: Limit by addresses

Please choose if you want to query the database for all addresses, or only for a restricted set of addresses. By this you could search for all messages at a certain address. You may select between addresses out of your address database, or type in a certain postal address to limit the query. So you could limit your search to addresses in a certain range around 12345 Berlin, as example. You could use this as well for finding all stops made by your vehicles at a certain customer's address.

Please notice, this is not available if your YellowFox account is restricted by privacy rules.

Please click *next*.

Step 4: Limit by types of messages

You can select only using a few out of all message types. Please click *next*.

Step 5: Limit by state of ignition

You may limit the search result for messages where the ignition has a certain status, or even where the messages were caused by the ignition's status change. Please click *next*.

Step 6: Limit by telematic status

If there are more than one telematic input available, you may want to restrict the result by this status. If you search for messages caused by a certain input, you can do this only for one input at the same time. Please click *next*.

Step 7: Limit by speed

If you want to see messages in your result only proceeding a certain speed level, you can do that in this step. Please click *next*.

Step 8: Result

You will receive a table containing all messes which meet your criteria given in the 7 steps above.

You may view or export them for further processing, as example. Please use the functions out of the Quickbar.

Quickbar Buttons:		
	Show the selected positions on a map	Does exactly this
	Select position messages	Just mark / unmark positions for displaying them at the map
	Back	One step back
	Next	One step forward
	Delete / Reset	Reset the assistant and restart selecting your criteria
	Report profiles	Call a Report Profile
	Print / Export	Print or Export your results
	Display Settings	Adapt display settings
	Help	View this page here
	Quicklink	Make a Quicklink
