

Tagesfahrtenreport

The bases of the daily usage report is the chosen telemetry input of the detection device.
Based on this telemetry input we evaluate the travel time, lifetime, distance, costs and mileage in this report.

Content

The basis of the daily usage report is the selected telemetry input of car.
Based on these selected telemetry, rides of one or more days are displayed.
You can see the start and end point of trip and the mileage and driving time.

If driver authentications have occurred for drives of the day, the drivers are assigned, each day, to the driver hex keys and driver names.

For each day, the total mileage, machine time, travel time, lifetime and driver are evaluated.
If you select multiple vehicles, you can see a summary table of vehicles on first page.

From the HTML output you can use the "change" button at the upper right corner, to change the telemetry input, report type and output format.

Special remarks

In the daily total usage report you can hide drives with a distance of 0km.
If this mode is enabled, you can see it by a comment in the header of the report output.

Output

This report supports the following output formats:

- HTML
- PDF
- Excel
- CSV
- Google Earth
