Report content

The representation is in the HTML and PDF output both, on a map and in a table.

The map and table can be folded up when opening the HTML output. With the "display/hide map" or "display/hide positions", the informations can be displayed or hidden.

If a driver authentication can be assigned to a position message, the driver is listed with his driver key and driver name to each position of the report.

By the "change" buttun (HTML output) you can switch the settings of the report draft for telemetry input, report type, object and output format.

Output formats

This report supports the following output formats:

- HTML
- PDF
- Excel
- CSV
- Google Earth
