Tagessummenreport

The bases of the daily total usage report is the chosen telemetry input of the detection device. Based on this telemetry input we evaluate the operating time, driving time, standing time, distance, average speed, stops and the beginning and end use daily in this report.

Index

Content

The days will be evaluated individually tabulated in the report output.

If driver authentications have occurred for drives of the day, the drivers are assigned, each day, to the driver hex keys and driver names.

When evaluating multiple objects in a report, a summary table is displayed in HTML, PDF and Excel first, which is an overall summary of individual objects throughout the reporting period.

From the HTML output you can use the "change" button at the upper right corner, to change the telemetry input, report type and output format.

Special remarks

In the daily total usage report you can hide drives with a distance of 0km. If this mode is enabled, you can see it by a comment in the header of the report output.

Output

This report supports the following output formats:

- HTML
- PDF
- Excel
- CSV
